

DILLION MEGIDA

Developer Advocate and Content Creator

Passionate about learning, building and simplifying web languages and technologies for developers via different forms of content

WORK EXPERIENCE

Frontend Developer Advocate

Stream | Netherlands | October 2021 - July 2022

Improved the our React SDK documentation by sharing reviews with the documentation team based on the unclear areas while using the docs to get familiar with Stream and build demo applications.

Created a [video quick guide](#) to complement our existing React tutorial

Created demo applications ([Gmail Spaces Clone](#) & [Twitter Clone](#)) that showed how to use our chat and feeds SDKs to integrate different chat/feeds features to existing applications

In Q2 2022, I created and promoted content that increased React Chat SDK repo stars by 25%, React Chat and Feeds Tutorial page sessions by almost 25%, and also [wrote/shared a Deno blog post](#) that brought in over 2000 new sessions on our website (based on Google Analytics)

Helped team members (new and from other departments) understand our SDKs and also fix bugs in their demo apps

Technical Writer / Content Creator

JUNE 2019 - PRESENT

Published over 93 articles on [my website](#) from JavaScript to Gatsby to React to HTML.

Published 37+ articles on [FreeCodeCamp](#) around web development with over 40k+ views weekly.

Written articles for [LogRocket](#), [Soshace](#) & [Vonage](#)

Created videos around [my career and life experiences](#) and also coding on [YouTube](#) and [Instagram](#).

As a content creator in general, I've published

a total of [300+ contents](#) on various web technologies, topics and career tips.

Amsterdam, Netherlands

Software Engineer

ThisDot | Remote | September 2020 - September 2021

Worked on translating the [graphqljs library](#) and the tests to [Lua](#). The biggest challenge was getting a hang of the entirely new language, Lua, which I never knew of and also knowing how different things in JavaScript can be interpreted. Learned a lot about the internals of the library and JavaScript.

Implemented filter for the many resources in ThisDot's internal website built with Gatsby. The biggest challenge was efficient management of state, which I used the useMemo hook for. I also created Gatsby source plugins for fetching resources during build time for faster page load,

Wrote end to end tests using Cypress for asserting different logic in a client Angular application.

Wrote some articles on React and Gatsby on the [blog page](#).

TECHNOLOGIES/SKILLS

Languages: HTML5, CSS3, JavaScript, Node.js, TypeScript

Frameworks/Libraries: SASS, Tailwind, React.js/Redux, Gatsby, NextJS, Express.js

Databases: MongoDB

Others: PWAs, Responsive Web Design, Web Accessibility

EDUCATION

Kwara State University

Computer Science, BSc | 2016 - 2020
